PS8101	Stats and Research Design I	1
PS8102	Stats and Research Design II	1
PS8103	Clinical Research Methods	1
PS8301	Psychopathology	1
PS8303	Systems of Psychotherapy	1
PS8304	Treatment of Psych Disorders	1
PS8306	Practicum in Clinical Psych I	1
PS8309	Psychological Assessment I	1
PS8310	Psychological Assessment II	1
Two Psychology electives*		2

Doctor of Philosophy

DEGREE REQUIREMENTS

Credits

Psychological Science Field

Comprehensive Requirement		(Milestone)
Dissertation		(Milestone)
PS9201	Psych Sci Professional Issues	1
PS9202	Practicum in Psych Science II	1
Three Psychology electives		3
(If a History of Psychology credit was not completed at the MA or senior undergraduate level, PS9101 History of Psychology must be one of the electives.)		

Clinical Psychology Field

Comprehensive Requirement		(Milestone)
Dissertation		(Milestone)
Internship in Clinical Psych		(Milestone)
PS9301	Ethical/Prof Issues Clin Psych	1
PS9303	Practicum in Clinical Psych II	1
PS9304	Practicum in Clinical Psych III	1
PS9306	Cognitive and Behav Therapy	1
Four Psychology electives*		4
(If a History of Psychology credit was not completed at the MA or senior undergraduate level, PS9101 History of Psychology must be one of the electives.)		

Foundational Areas:

Biological Bases of Behaviour
 Cognitive-Affective Bases of Behaviour
 Social Bases of Behaviour
 Individual Behaviour
 Historical and Scientific Foundations of General Psychology

*To meet the breadth requirements for accreditation with the Canadian Psychological Association, clinical psychology students are required to take graduate or undergraduate courses covering the five foundation areas.

Electives**Credits*****Psychological Science***

PS8501	Special Topics in Cognition	1
PS8502	Special Topics in Developmental Psych	1
PS8503	Special Topics in Health Psychology	1
PS8504	Special Topics in Social Psychology	1
PS8506	Percept and Cognitiv Ergonomics	1
PS8507	Cognitive Neuroscience	1
PS8508	Critical Perspectives in Psych	1
PS8509	Culture and Identity	1
PS8510	Early Development	1
PS8511	Gender and Health	1
PS8512	Learning, Plasticity, Memory	1
PS8513	Multivariate Statistical Anal	1
PS8515	Psychology of Aging	1
PS8516	Psychology and Law	1
PS8517	Psychometric Theory, Research	1
PS8518	Research Design in Child Devel	1
PS8519	Social Cognition	1
PS8520	Socio-Cognitive Development	1
PS8521	Community Psychology	1
PS8522	Directed Readings: Psych Sci	1
PS8524	Perception and Action	1
PS8525	Practicum in Teaching	1
PS8526	Special Topics in Perception	1
PS8527	Computational Methods in Psych	1
PS8528	System and Meta-Analyt Reviews	1
PS8529	Qualitative Research Methods	1
PS8530	Psychology of Body Image	1
PS8531	Anatomy of the Human Brain	1
PS8532	Cognitive Aging	1
PS9101	History of Psychology	1

Clinical Psychology

PS8701	Special Topics in Clinical Psych	1
PS8703	Anxiety Disorders	1
PS8704	Behav Disorders in Children	1
PS8705	Clinical Neuropsychology	1
PS8706	Clinical Psychopharmacology	1
PS8707	Cognition and Psychopathology	1
PS8708	Eating Disorders	1

PS8709	Directed Readings: Clin Psych	1
PS8710	Couple and Family Therapy	1
PS8711	Child and Adolescent Treatment	1
PS8712	Mood Disorders	1
PS9305	Practicum in Clinical Psych IV	1

COURSES

Internship in Clinical Psychology

Supervised internship in a community setting approved by the Director of Clinical Training. This internship is required of all students in the clinical psychology Ph.D. program and must be taken over the course of a full year. Prerequisites: Completion of all course requirements in the clinical psychology doctoral program, and approval of the Director of Clinical Training. This is a "Milestone." Pass/Fail

Master's Thesis

Independent research leading to an acceptable master's thesis. This is a "Milestone." Pass/Fail

Comprehensive Requirement

Students will be required to complete a paper designed to provide breadth in their training. This is a "Milestone." Pass/Fail

Doctoral Thesis

Independent research leading to an acceptable doctoral dissertation. This is a "Milestone." Pass/Fail

PS8101 Statistics and Research Design I

This course provides an overview of basic statistical concepts, applications of these concepts, and an introduction to experimental design and psychology. Topics to be covered include probability theory, significance testing, correlational and regression methods, and an introduction to computerized statistical analysis. This course is required of all graduate students in psychology during the first semester of their first-year, and it is the first part of a required two-course sequence on this topic. Prerequisites: Undergraduate course(s) in psychology statistics or equivalent, and graduate status. 1 Credit

PS8102 Statistics and Research Design II

This course provides instruction in advanced methods in regression and multiple regression, as well as instruction in advanced analysis of variance techniques, general linear models, analysis of categorical data, use of non-parametric statistics, and structural equation modeling. This course is required of all graduate students in psychology during the second semester of their first-year, and is the second part of a required two-course sequence on this topic. Prerequisites: Statistics and Research Design I, and graduate status. 1 Credit

PS8103 Clinical Research Methods

This course offers a review of research methods in clinical psychology, including issues related to design, measurement, and interpretation. Topics to be covered include test construction and psychometrics, experimental and observational methods in clinical research, single case experimental designs, qualitative research, research ethics, diversity issues in clinical research, etc. This course is required of all MA students in clinical psychology. 1 Credit

PS8201 Applied and Translational Research Methods

An introduction to applied and translational research methods. In the first half of the course, discussions will include how to balance good science with specific real-world objectives and how to translate laboratory findings into real-world solutions. In the second half of the course, students engage in directed readings that will prepare them for their Practicum placements (e.g., Cognitive Ergonomics, Program Evaluation). 1 Credit

PS8202 Practicum in Psychological Science I

This internal practicum is designed to provide students with breadth in psychological research methods and approaches. Students contribute to a single project that is complimentary to their core area of interest or in multiple smaller projects, spanning multiple labs. Under exceptional circumstances (e.g. infrastructure needs or population opportunities), students may request to conduct the practicum at an external site. This course is required for all MA students in the Psychological Science Field. Pass/Fail. 1 Credit

PS8301 Psychopathology

An overview of issues related to diagnostic features, epidemiology, developmental factors, etiology, and descriptive psychopathology for a wide range of psychological disorders, including anxiety disorders, mood disorders, somatoform disorders, psychotic disorders, eating disorders, personality disorders, sexual and gender identity disorders, substance use disorders, cognitive disorders, and others. This course is required of all first-year master's students in clinical psychology. 1 Credit

PS8303 Systems of Psychotherapy

An overview of theory and research related to psychotherapy and behaviour change. Includes a review of the major schools of psychotherapy, including cognitive and behavioural therapies, interpersonal psychotherapy, psychodynamic psychotherapy, experiential and humanistic psychotherapies, couples and family therapies, and group therapy. In addition, non-specific aspects of psychotherapy will be discussed, including the therapeutic relationship, client factors, and therapist factors that contribute to outcome. This course is required of all first-year graduate students in clinical psychology. 1 Credit

PS8304 Treatment of Psychological Disorders

An overview of theory and practice of evidence-based, psychological and biological treatments for a wide range of psychological disorders, including anxiety disorders, mood disorders, somatoform disorders, psychotic disorders, eating disorders, personality disorders, sexual and gender identity disorders, substance use disorders, cognitive disorders, and others. This course is required of all second-year graduate students in clinical psychology. 1 Credit

PS8306 Practicum in Clinical Psychology I

Practicum training in clinical assessment, psychological testing, and psychological intervention under the close supervision of one or more registered clinical psychologists in a community setting. This course is required of all graduate students in the clinical psychology MA program. The minimum duration is 350 hours. Students are encouraged to apply for practicum placements during their first year from an approved list of supervisors and sites. Prerequisites: Completion of Introduction to Psychological Assessment and Systems of Psychotherapy. Pass/Fail. 1 Credit

PS8309 Psychological Assessment I

This course explores the theory and practice of cognitive and personality assessment for both adults and children, with an emphasis on evidence-based measures. Instruction in cognitive assessment will include exposure to both intellectual assessment methods and neuropsychological measures. Personality assessment training will include exposure to objective and projective methods. Issues related to ethics in assessment are also covered. This course is required of all first-year graduate students in clinical psychology. 1 Credit

PS8310 Psychological Assessment II

This course expands upon issues covered in Psychological Assessment 1, and includes discussion of topics such as clinical interviewing, evidence-based diagnostic assessment, and behavioral assessment. Prerequisites: PS8301 Psychopathology; PS 8309 Psychological Assessment I. This course is required of all MA students in clinical psychology. 1 Credit

PS8501 Special Topics in Cognition

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., eye-witness memory, cognitive aging, thinking and reasoning, etc.). 1 Credit

PS8502 Special Topics in Developmental Psych.

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., perceptual-motor development; theory of mind; youth at risk; life-span development, etc.). 1 Credit

PS8503 Special Topics in Health Psychology

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., psychology and cancer; nutrition and body image; psychology and HIV; psychology of pain, etc.). 1 Credit

PS8504 Special Topics in Social Psychology

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., forensic psychology; social comparison; psychology of persuasion, etc.). 1 Credit

PS8506 Perceptual and Cognitive Ergonomics

An overview of research in the emerging field of cognitive ergonomics. Includes a survey of successful cognitive ergonomic interventions and research methods for assessing the fit between human perceptual-cognitive abilities and the demands of a machine, task, or environment. 1 Credit

PS8507 Cognitive Neuroscience

An overview of the use of neuroimaging in the investigation of complex human cognitive abilities. Content will include 1) a brief review of neuroanatomy, 2) an introduction to the fundamentals, experimental design strategies, and advantages and limitations of current brain imaging techniques (e.g., MRI, PET, ERP, TMS), 3) critical reviews of findings and theories on the relations between the brain, various domains of cognition, and behaviour in current neuroimaging literature. For illustrative purposes, some emphasis will be placed on the use of fMRI to understand normal and abnormal mnemonic processes. 1 Credit

PS8508 Critical Perspectives in Psychology

The focus is on critically evaluating the ways in which psychology as a discipline not only discovers but also shapes and produces knowledge about human behaviour, cognition and emotion. Critical psychologists are centrally interested in the socio-political implications and applications of psychological theory and practice. Drawing on a variety of conceptual frameworks, including feminist theory, post-structuralism, cultural studies, and contemporary psychoanalysis, this course will provide an overview of the wide range of epistemological, methodological and empirical innovations in the study of behaviour and experience. 1 Credit

PS8509 Culture and Identity

The course serves as an introduction to the interrelated concepts of culture and identity, especially as they intersect in multicultural settings, such as Canada, or pluralistic settings, such as the United States. It is intended to foster appreciation of the impact of

cultural influences on who we understand ourselves to be. Issues of race, ethnicity, indigenous heritage, power, gender, sexual orientation, and disability are explored in order to better understand psychological processes. The course is also intended to introduce these issues to clinical psychology students in order to facilitate their training as professionals able to work with diverse populations. 1 Credit

PS8510 Early Development

This course examines primary research from the period of prenatal development to early childhood and adolescence. The core content and themes, drawn from both basic developmental science and clinical psychology, will vary with each offering of the course to reflect contemporary issues in the field encompassing such topics as: basic processes such as perceptual-motor intelligence; caregiver-infant relationships; language acquisition and literacy; social-cognition and the social-cultural context of early development. The course will focus strongly on the diverse research methods associated with working with infants, children, and parents. 1 Credit

PS8511 Gender and Health

An overview of the relationship between biological, psychological, and socio-cultural determinants of health and illness, including health behaviours, the health care system, and health policy formation. Gender will be examined as both a biological (e.g., hormonal) and socio-cultural variable in relation to a range of specific topics, including: stress, psychoimmunology, cardiovascular disease, cancer, pain, and disability. 1 Credit

PS8512 Learning, Plasticity, and Memory

A survey of various aspects regarding the acquisition, retention, and retrieval of memories. Critical discussions will cover principles and mechanisms of learning, cognitive and neural organization of memory, memory processes, and forms of cognitive and neural plasticity. These domains will be extended to applied areas including mnemonic techniques (e.g., strategies, rehabilitation), disorders of memory (e.g., amnesia), lifespan issues (e.g., development, aging), and the malleability and reconstructive processes of learning and memory (e.g., false memories). 1 Credit

PS8513 Multivariate Statistical Analysis

An introduction to multivariate statistical methods in psychology. Techniques covered include multivariate analysis of variance, multiple regression, factor analysis, cluster analysis, discriminant function analysis, hierarchical modeling, structural equation modeling, and canonical correlation. Prerequisites: Statistics and Research Design I and II. 1 Credit

PS8515 Psychology of Aging

This course will provide students with a theoretical and empirical research framework for understanding psychology of aging. The topics will include a broad range of age-related changes in sensory, perceptual, cognitive, personality, and social cognitive processes, as well as social and cultural aspects of aging. Factors such as brain changes, health, and lifestyle issues will be discussed in terms of how they may influence the observed age-related differences in behaviours and attitudes. 1 Credit

PS8516 Psychology and Law

In-depth discussion of the theoretical and practicum issues related to the intersection between psychology and the law. The challenges inherent in combining psychology's empirical approach with the legal system's focus on case-rulings and procedure will be explored through discussions of some key areas of psycho-legal research. Such topics may include the role of the jury, expert and ethical issues, risk assessment, fitness to stand trial, criminal investigation techniques, and the role of memory in the legal realm. 1 Credit

PS8517 Psychometric Theory and Research

This course focuses on measurement theory, scale construction, item response theory, and the interpretation of related issues. Topics covered include psychometric scaling methods, exploratory and confirmatory factor analysis, reliability analysis, test interpretation, measurement of change, and issues pertaining to the analysis of quantitative experimental and nonexperimental data. 1 Credit

PS8518 Research Design in Child Development

Focuses on the unique conceptual, design, and analytic challenges that face researchers working with young children. Specific topics may include the design and meaning of habituation and "looking time" studies with infants, the use of observational techniques with young children, and the pragmatic issues surrounding interviewing and questioning children. For each topic, discussion will begin with research that demonstrates why children must be treated differently from adults in research studies (e.g. how children's understanding of the pragmatics of language differs from adults') and then go on to address how researchers might compensate for those differences. Methodologies designed specifically to gather developmental data, such as longitudinal designs, will also be given emphasis. 1 Credit

PS8519 Social Cognition

This course reviews theory and research relating to ways in which people process social information and make sense of their social world. Topics will include judgment under uncertainty, social attribution, stereotypes and prejudices, interpersonal attraction, social comparison, categories and schemas, the relationship between motivation and cognition, and methods for studying social cognition. 1 Credit

PS8520 Socio-Cognitive Development

Discussion of theories and issues in the social and cognitive development of children, particularly those concerning the interplay between social and cognitive development (so-called socio-cognitive development). Broadly construed, socio-cognitive development describes how children's developing cognitive abilities allow them to better understand their social world (e.g. how children come to

understand, predict, and explain the behaviour of other people) and how children's social world influences their cognitive development (e.g. how children imitate and learn from others' testimony). 1 Credit

PS8521 Community Psychology

This course provides a critical survey of community psychology and the relationship between the social environment and psychological wellbeing. General themes include ecological analysis, stress, community mental health, program development/evaluation, and community supports for individuals with a range of social problems, including homelessness, substance abuse, involvement in the criminal justice system, social marginalization, and health disparities between social groups. Emphasis will be on social problems and how community-academic partnerships can foster change. 1 credit

PS8522 Directed Readings in Psychological Science

This course involves meetings between a student and a faculty member to discuss readings related to a topic of mutual interest. 1 Credit

PS8524 Perception and Action

This course will cover core issues in visual, auditory, and multimodal perception. Research that considers perceptually guided action will also be considered. 1 Credit

PS8525 Practicum in Teaching

Students in this course will receive closely supervised, pedagogical training in planning, preparing, and delivering an undergraduate course in psychology. Training will include strategies for evaluating student progress as well. Students will have the opportunity to have their teaching observed and videotaped and to receive feedback from the instructor and the other students in the practicum. This course is normally taken during the second, third, or fourth year of graduate study. Pass/Fail. 1 Credit.

PS8526 Special Topics in Perception

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., music perception and cognition, clinical perception and perceptual disabilities, perceptual and cognitive aging). 1 Credit

PS8527 Computational Methods in Psychology

This course introduces students to computational methods in use within perceptual, cognitive and brain sciences. Topics include signal processing, stimulus control, psychophysiology (GSR, EMG, HR, RR, EEG/ERP), data filtering, and data reduction. Each topic will be introduced using examples from the literature, and will be explored using a combination of theory and application. The course is designed to be of use for students with or without prior programming experience. 1 Credit

PS 8528 Systematic Meta-Analytic Reviews

Empirical evidence in psychology and related disciplines is burgeoning at a rate that threatens our ability to assimilate it. For this reason, there is a growing emphasis on literature syntheses that integrate available information comprehensively, critically, and without bias. In this course, students will learn two such methods, systematic review and meta-analysis. Students will learn to identify, appraise, and synthesize research evidence both qualitatively and quantitatively. Prerequisites: PS8101 and PS8102. 1 Credit

PS8529 Qualitative Research Methods

Qualitative research emphasizes the complexity and diversity inherent to psychology, and permits rigorous investigations that preserve the contexts within which cognitions, emotions, and behaviours occur. The goal of this course is to examine epistemologies, approaches, and techniques of qualitative inquiry used in the study of psychological phenomena. The course will blend lecture and experiential learning in areas of data collection methods, approaches to data organization, analysis, interpretation, and presentation of research findings. 1 Credit

PS8530 Psychology of Body Image

This graduate seminar covers current theories, research and controversies in the area of body image. Topics include theoretical conceptualizations of body image, familial influences, and individual differences (including gender, personality, race/ ethnicity and culture). Body image in psychiatric and medical contexts are considered, as are the effects of modifications to the body (diet, exercise, surgery). The course also includes a critical appraisal of treatment and prevention of body image problems. 1 Credit.

PS8531 Anatomy of the Human Brain

This course involves an in-depth review of human brain anatomy in the context of Psychology. In addition to terminology and topography of brain structures, emphasis is placed on anatomical relations among functional systems in an anatomical framework. Content ranges across microscopic and macroscopic levels, as reviewed through readings, lectures, and interactive media. Review of current evidence and methodologies will also include discussions regarding neurodevelopment, neuroevolution, neurodegeneration, neuroplasticity, and neuroimaging, neurological, and neuropsychological techniques. 1 Credit

PS8532 Cognitive Aging

This course provides a comprehensive survey of cognitive aging research, with a major focus on cross-sectional and longitudinal studies of healthy aging and a minor focus on pathological aging. Specific topics include: life-span theory; research methods in cognitive aging; the aging brain; mild cognitive impairment and dementia; genetics; major cognitive domains (perception, attention and executive function, memory, decision making); affective influences on cognition; education, plasticity, and brain reserve; cognitive effects of lifestyle and exercise. 1 Credit.

PS8701 Special Topics in Clinical Psychology

This course will be offered from time to time, with the specific topic varying from year to year depending on the instructor and student interests (e.g., psychotic disorders; personality assessment; interpersonal psychotherapy, etc.). 1 Credit

PS8703 Anxiety Disorders

This course introduces students to issues related to psychopathology, assessment, and treatment of anxiety disorders. Examples of covered topics include epidemiology, theoretical perspectives, etiology, biological factors, psychological factors, and evidence-based treatments. 1 Credit

PS8704 Behavioural Disorders in Children

This course will be an intensive survey of the literature dealing with social, emotional, and behavioural disorders in children and adolescents. Current theory and research and their implications for clinical practice will be examined. In addition, theoretical and methodological advances related to research on risk and protective factors and their influence on issues such as early school dropout, juvenile delinquency, substance abuse, and adolescent suicide, will be critically examined. 1 Credit

PS8705 Clinical Neuropsychology

This course is an overview of current knowledge relevant to clinical neuropsychology and the fundamental principles of neuropsychological assessment. From a single-case study design approach, information from variety of sources, such as observable signs, interviewing, histories and neuropsychological tests will be used to detect and evaluate cerebral dysfunction. Focus will be on the nature of different types of disorders, the symptoms that emerge from brain damage and procedures used to assess these symptoms. Prerequisites: Introduction to Psychological Assessment. 1 Credit

PS8706 Clinical Psychopharmacology

This course focuses on current practices regarding pharmacotherapy for forms of psychopathology. Following review of essential principles of psychopharmacology, the clinical application of major classes of drugs to treat mental illness will be covered (e.g., anxiolytics, antipsychotics, antidepressants, etc.). The mechanisms of action and scientific evidence, along with historical and philosophical backgrounds, supporting use of these drugs will be discussed. The course will also touch on aspects of drug interactions, child/adolescent treatment, and appreciation of the broader role neurochemistry plays in daily thought and behaviour. 1 Credit

PS8707 Cognition and Psychopathology

An overview of issues and findings related to cognitive abilities associated with major forms of mental illness. Four broad areas will be discussed: 1) theory, approach, and main findings regarding use of neuropsychological and cognitive-science paradigms in studying psychological disorders; 2) issues and solutions regarding identification of differential cognitive deficits in psychopathology; 3) the interplay of cognition with psychological symptoms and daily functioning; 4) longitudinal factors (premorbid risk, profiles across time). 1 Credit

PS8708 Eating Disorders

An overview of eating disorders including anorexia nervosa, bulimia nervosa, and eating disorders not otherwise specified. Topics to be covered include: biological bases of disordered eating; historical trends in prevalence of eating pathology; cognitive disturbances associated with eating disorders; and causes, correlates, and outcomes of eating pathology as well as the complexity and controversy surrounding these conceptualizations. 1 Credit

PS8709 Directed Readings: Clinical Psychology

This course involves meetings between a student and a faculty member to discuss readings related to a topic of mutual interest. 1 Credit

PS8710 Couple and Family Therapy

Students in this course will be introduced to various theories and associated interventions designed to improve couple and family functioning, with particular emphasis placed on evidence-based theory and treatment. Specific clinical issues, including sexual problems, intimate aggression and infidelity, as well as treatment of individual psychopathology in a couple/family context will be explored. Individual development, race/ethnicity, sexual diversity, and other individual differences in case conceptualization and treatment provision will be considered throughout. 1 Credit

PS8711 Child and Adolescent Treatment

Students in this course will be introduced to basic clinical principles of child and adolescent intervention for a variety of disorders and presenting problems, with an emphasis on empirically-supported treatments. Specific interventions comprising these treatments will be examined and discussed as they apply to particular clinical disorders and problems. Special attention will be paid to developmental considerations, race and ethnic diversity, sexual diversity, and other individual differences throughout the course. 1 Credit

PS8712 Mood Disorders

Students in this course will be introduced to evidence-based theories and interventions for mood disorders. Of particular interest will be demographic issues in mood disorders, such as sex, culture/ethnicity and age, as well as differences associated with diverse treatment settings, such as primary care and specialized mental health settings. The role of mood in women's health (e.g., premenstrual dysphoria, menopause, pregnancy, postnatal depression) will also be discussed. 1 Credit

PS9101 History of Psychology

An exploration of history of psychology topics, with emphasis on historical perspectives on contemporary topics and links between psychological science and science-based practices of psychology. Students will be exposed to original sources and contemporary critical scholarship that elucidates the temporal and culturally embedded contingencies that shaped the various fields of psychology. The primary objective of this course is to teach students how to use history to critically assess what psychologists do and the knowledge they generate. 1 Credit

PS9201 Professional Issues and Ethics in Psychological Science

An overview of topics related to professional development, including finding a job or post-doctoral fellowship, grantsmanship, research ethics, professional affiliations and accreditations, and managing a research program. Advantages and disadvantages of career opportunities in both academia and industry will be explored. This course is required for all doctoral students in the psychological science field. 1 Credit

PS9202 Practicum in Psychological Science II

This internal or external practicum is designed to provide students with additional breadth in research methods. Students lead a research project that is complimentary to their core research area. Students are encouraged to consider the societal relevance of the project and connections to their main line of research. Prerequisites: PS8202, PS8101, PS8102, PS8201. Pass/Fail. 1 Credit

PS9301 Ethical and Prof Issues in Clinical Psych

This course covers ethical and legal issues in clinical psychology research, teaching, assessment, and treatment, with an emphasis on the Canadian Code of Ethics for Psychologists and the College of Psychologists of Ontario Standards and Guidelines of professional conduct. Ethical issues related to cultural, racial, and gender diversity in the practice of psychology are also discussed. Required for all doctoral students in the clinical psychology field. 1 Credit

PS9303 Practicum in Clinical Psychology II

Practicum training in clinical assessment and intervention under the close supervision of one or more registered clinical psychologists in a community setting. This course is required of all graduate students in the clinical psychology Ph.D. program. The minimum duration is 350 hours. Students are encouraged to apply for practicum placements from an approved list of supervisors and sites. Prerequisites: Completion of Practicum in Clinical Psychology I. Pass/Fail. 1 Credit

PS9304 Practicum in Clinical Psychology III

Advanced practicum training in clinical assessment and intervention under the close supervision of one or more registered clinical psychologists in a community setting. This course is required of all graduate students in the clinical psychology Ph.D. program. The minimum duration is 350 hours. Prerequisites: Completion of Practicum in Clinical Psychology II. Pass/Fail. 1 Credit

PS9305 Practicum in Clinical Psychology IV

A second advanced practicum training in clinical assessment and intervention under the close supervision of one or more registered clinical psychologists in a community setting. This course is required of all graduate students in the clinical psychology PhD program. The minimum duration is 350 hours. Prerequisites: Completion of Practicum in Clinical Psychology III. Pass/Fail. 1 Credit

PS9306 Cognitive and Behavioural Therapy

An in-depth course on theory and practice of cognitive and behavioural therapies. Topics covered include exposure-based treatments, cognitive strategies, relaxation-based strategies, mindfulness and acceptance-based strategies, and techniques for enhancing motivation. Prerequisite: Completion of either Systems of Psychotherapy or Treatment of Psychological Disorders. Formerly PS8305. 1 Credit
