

KEELE STREET BIORETENTION CELL

Area that can effectively receive & treat storm water runoff from the adjacent hard surface, while providing good growing conditions for trees and plants. Annually, up to 198,000 L of storm water runoff will pass through to help water the trees & slow down the flow rate of the water. Reduction of local ambient temperature up to 2°C.

100 m² Impermeable Surface Replaced with Permeable Green Space
